

## Line Treatment

Wrinkles are an unmistakable sign of aging. Wrinkling is not only accelerated by hereditary factors, but also by external influences such as insolation, smoking and personal lifestyle. Aesthetically disturbing wrinkles can be effectively corrected using various methods in aesthetic plastic surgery. Your appearance regains its youthful freshness and vitality with these treatments. We offer you the following methods:

### Injectables

We solely use products that are compatible with the human body.

These include, for example, hyaluron acid or lactic acid preparations. Our injectable method with your own fat cells is especially gentle and effective. The fatty tissue is attained during a liposuction treatment or especially for the injectables.

### Treatments with Botulinum Toxin (Botox®)

Botulinum Toxin is most frequently used on anger, brow and laughing lines (crow's feet) in plastic surgery. The effective mechanism is based on the short-term relaxation of the facial muscles. We also use Botulinum Toxin to combat excess activity of the sweat glands in the axillae, feet and hands. Botulinum Toxin can also be of advantage as a pre-treatment for aesthetic plastic operations.

### Skin Peeling

The peeling of the skin with high-speed grinders leads to attractive results with superficial skin changes and scars, deeper facial lines, pigment disorders and large hammer noses.

### Laser Treatments

Laser treatments have experienced a dramatic collapse over the past few years due to numerous disadvantages. The high side-effects rate and long drop-out time especially speak for the choosing of alternative procedures.

### Peeling Treatments

We use superficial, middle and deep chemical peels depending on the depth of lines or skin damage. Superficial applications may be carried out repeatedly over months whereby extremely impressive and long-lasting medium and especially deep peelings are attained after just one single treatment. Conscientious pre and post treatments are also necessary with the laser therapy. Collagen and elastic fibres can be reformed due to a pre-treatment with Botulinum Toxin in both treatments. Deep peels are carried out in semi-sleep.

Please arrange for an appointment or get in contact with us if you are interested in this treatment. We will be happy to advise you and deal with any questions you might have!
